

Must-Have Before Launch

1. Fill in .env.local credentials

NEXT_PUBLIC_SUPABASE_URL, NEXT_PUBLIC_SUPABASE_ANON_KEY, SUPABASE_SERVICE_ROLE_KEY, ANTHROPIC_API_KEY, ADZUNA_APP_ID, ADZUNA_APP_KEY, HUNTER_API_KEY, RESEND_API_KEY

2. Run Supabase DB migrations

Execute all 3 SQL files in supabase/migrations/ via the Supabase project SQL editor

Functional Gaps to Fix

1. Email verification redirect

After signup, Supabase sends a confirmation email — the app needs to handle the redirect back gracefully

2. End-to-end PDF/DOCX parse test

pdf-parse + mammoth are wired but untested with a real uploaded file

3. Adzuna India coverage check

Verify Adzuna returns meaningful listings for Indian cities (Mumbai, Bangalore, Hyderabad, etc.)

Nice-to-Have / Polish

1. Real favicon & OG image

icon.svg, icon-light-32x32.png, icon-dark-32x32.png referenced in layout metadata — replace placeholders

2. Mobile responsiveness

Hero, Features, Pricing sections not yet tested at mobile widths

3. Edge-case error states

Network failure, file too large, Gemini timeout — not gracefully handled on upload/tailor/login pages

Personal Job Hunt (Separate from the App)

1. Regain Gmail access

Password reset was blocked — Gmail access is needed to sign into the Claude account inside the Chrome extension

2. Pair Claude-in-Chrome extension

Extension must be signed in and listening before any autonomous apply can fire on LinkedIn/Naukri/Indeed

3. Verify Greenhouse/Lever apply flow

Test one-click ATS submission against a real low-stakes Greenhouse posting once extension is connected
